

Stuck on ArmA3 loading screen

If you hit "Play" on the launcher and get stuck on the ArmA3 loading screen... here's how to fix it.

First go to steam and verify the integrity of your ArmA3 (Right click, go to preferences, Local files, Verify). Once it has checked it will most likely say that 2 files need to be re-acquired... let it do that then verify again.

Once that is done, launch ArmA3 from steam and join a random server (any one that you can get in to will do) move about for a couple of seconds and then exit ArmA3 through the menu system.

Load the CL3 Launcher and go to the settings tab, change your malloc to "System" and wait for it to re-highlight, then change it back to the TBB4 Malloc.

Then hit the play button.
