If when trying to download the CL launcher one or more of the following situation occurs:

- The browser window closes
- Nothing happens
- The file disappears from the Downloads folder after download
- In chrome, the browser displays an error message saying that the site cannot be reached
- In IE or Edge, the browser says it could not safely open the address

All you need to do is either temporarily disable your antivirus software (including Windows Defender) or whitelist the CL launcher installer.

Unfortunately, some antivirus software falsely flag the launcher as being infected. We guarantee that all our files are clean and safe.
